DETAILED ACTION

Original Patent

The original patent, or a statement as to loss or inaccessibility of the original patent, must be received before this reissue application can be allowed. See 37 CFR 1.178.

Oath

The reissue oath/declaration filed with this application is defective because it fails to contain a statement that all errors which are being corrected in the reissue application up to the time of filing of the oath/declaration arose without any deceptive intention on the part of the applicant. See 37 CFR 1.175 and MPEP § 1414.

Claim Rejections - 35 USC § 251

Claims 1-23, 28-33 and 40-67 rejected as being based upon a defective reissue Declaration under 35 U.S.C. 251 as set forth above. See 37 CFR 1.175.

The nature of the defect(s) in the Declaration is set forth in the discussion above in this Office action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. §102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 59-62 are rejected under 35 U.S.C. §102(b) as being anticipated by Cordell (USPN 4,350,904 - newly cited). Cordell discloses, in Fig. 1, a circuit which will provide a method comprising: “generating a reference current (by current source 30)”; and “comparing

Art Unit: 2816

(by connecting the collectors of 18 and 20 and 32 and 34 and by providing output circuit 44) and the reference current to a supply-related current (generated by 18)".

Examiner has considered Applicant's remarks for the above rejection and has not found them to be persuasive. The reference to Cordell makes it clear that resistor 42 provide I3 with a temperature dependence the same as that of resistor 40 (see cols. 3-4). It is clear that the current in 42 is compared with the current in 40, to provide an output current in transistor 34.

Allowable Subject Matter

Examiner has considered Applicant's remarks concerning the temperature dependency of the current sources. With respect to current equation 2 of Col. 3 of the specification, as stated previously, Current I_A is clearly temperature dependent. With respect to current equations 4 and 5 of Col. 3, Applicant states that the term V_T provides for temperature dependency of currents I_C and I_D . Examiner has reconsidered this point and has founds this to be persuasive. With respect to current equation 3, Applicant states that the term V_{BE} "as is well known, has a temperature coefficient..." Examiner contends that as a general rule, the voltage V_{BE} is determined by the voltages applied to the base and emitter. However, in this case, V_{BE} is the base-emitter voltage, for example, B3 of Fig. 2. Transistor B3 is a diode-connected bipolar transistor. In the particular case of a diode-connected transistor, the base-emitter voltage is in fact equal to the threshold voltage of the bipolar transistor. Therefore, Examiner agrees that within a bipolar transistor, V_{BE} is temperature dependent.

Examiner has considered Applicant's remarks concerning the art rejection of claims 28-33, 45-47, 57 and 58, and has found such to be persuasive. Examiner agrees that the "third current" R_o of Ichimaru is not "related to a power-supply voltage" as claimed.
